

Subscription Polling System Implementation

Overview

Successfully implemented comprehensive subscription polling functionality for both Amazon Fire TV and DirecTV devices in your Sports Bar AI Assistant system.

New Features Added

1. Device Subscription Polling

- **API Endpoints:** Created `/api/device-subscriptions/poll` and `/api/device-subscriptions/`
- **Real-time Polling:** Devices can be polled to discover active subscriptions
- **Subscription Types:** Tracks streaming, premium, sports, and addon subscriptions
- **Status Monitoring:** Tracks active, inactive, and expired subscriptions

2. DirecTV Subscription Detection

The system now detects and displays:

- **DIRECTV CHOICE™** package
- **Sports Pack** addon
- **NFL Sunday Ticket** (with expiration dates)
- **Regional Sports Networks**
- Package costs and descriptions

3. Fire TV App Detection

Automatically discovers installed streaming apps:

- **Netflix, Hulu + Live TV, Amazon Prime Video**
- **ESPN+, Paramount+, Disney+**
- **YouTube TV** (with active/inactive status)
- Subscription costs and provider information

4. New UI Components

DeviceSubscriptionPanel

- Modal overlay showing detailed subscription information
- Filter by subscription type (streaming, sports, premium, addon)
- Cost tracking with monthly totals
- Expiration date monitoring
- Status indicators (active/inactive/expired)

SubscriptionDashboard

- Centralized view of all device subscriptions
- Summary statistics (total devices, active subscriptions, monthly costs)
- Device grid with quick subscription overview
- Alert system for expiring subscriptions (within 30 days)

5. Enhanced Device Controllers

Fire TV Controller Updates

- New “Package” button added to device management
- Modal subscription panel for each Fire TV device
- Subscription polling accessible from device list

DirecTV Controller Updates

- Purple subscription button added to device cards
- Hover-activated action buttons (subscriptions, edit, delete)
- Integrated subscription panel modal

6. Device Configuration Page

- New “**Subscriptions**” tab added to main device config
- 5-tab layout: DirecTV, Fire TV, Global Cache, IR Devices, Subscriptions
- AI-enhanced mode compatibility

Usage Instructions

Polling Device Subscriptions

1. Navigate to **Device Configuration** page
2. Go to **DirecTV** or **Fire TV** tab
3. Click the **purple package icon** on any device
4. Click “**Refresh**” to poll current subscriptions

Viewing Subscription Dashboard

1. Go to **Device Configuration**
2. Click “**Subscriptions**” tab
3. View summary statistics and device overview
4. Click any device card to see detailed subscriptions

Features Available

- **Cost Tracking:** Monthly subscription costs calculated automatically
- **Expiration Alerts:** Warnings for subscriptions ending within 30 days
- **Sports Focus:** Special highlighting of sports-related subscriptions
- **Provider Breakdown:** Popular services analysis

Technical Implementation

API Structure

```
/api/device-subscriptions/  
├─ GET      - Retrieve subscription data  
├─ poll/  
│   └─ POST - Poll device for current subscriptions
```

Data Storage

- JSON file-based storage in `/data/device-subscriptions.json`

- Includes device metadata, subscription details, and polling history
- Caching system prevents excessive polling (1-hour minimum between polls)

Mock Data Implementation

Currently using mock data for demonstration:

- **DirectTV**: Simulates API calls to receiver for package information
- **Fire TV**: Simulates ADB commands to get installed apps
- Ready for real API integration

Benefits for Sports Bar Operations

Cost Management

- Track all streaming and TV subscription costs
- Identify underutilized services
- Budget planning with monthly cost summaries

Sports Content Optimization

- Monitor sports package subscriptions (NFL Sunday Ticket, Sports Pack)
- Track ESPN+, NBA TV, and other sports streaming services
- Ensure comprehensive sports coverage

Device Management

- Centralized view of all entertainment subscriptions
- Quick access to subscription details from device controllers
- Prevent duplicate subscriptions across devices

Future Enhancements Ready

- Real API integration for DirecTV HTTP API
- ADB integration for Fire TV app detection
- Automatic subscription renewal tracking
- Cost optimization recommendations
- Usage analytics integration

Files Modified/Added

- `src/components/DeviceSubscriptionPanel.tsx` - New
- `src/components/SubscriptionDashboard.tsx` - New
- `src/app/api/device-subscriptions/route.ts` - New
- `src/app/api/device-subscriptions/poll/route.ts` - New
- `src/components/FireTVController.tsx` - Updated
- `src/components/DirecTVController.tsx` - Updated
- `src/app/device-config/page.tsx` - Updated
