

# libCEC Package Fix for Ubuntu 22.04

---

## Issue

---

The installation scripts were attempting to install `libcec4`, which is not available in Ubuntu 22.04 repositories.

## Solution

---

Updated all installation scripts to use the correct package name `libcec6` for Ubuntu 22.04 compatibility.

## Files Updated

---

1. **install.sh** - Main installation script
2. **install-cec-bridge.sh** - CEC bridge installation script
3. **update\_from\_github.sh** - GitHub update script

## Changes Made

---

Changed package installation command from:

```
sudo apt install -y cec-utils libcec4 libcec-dev
```

To:

```
sudo apt install -y cec-utils libcec6 libcec-dev
```

## Verification

---

-  `libcec6` (6.0.2-5) installed successfully
-  `cec-utils` installed successfully
-  `libcec-dev` installed successfully
-  Changes committed to GitHub
-  Server running on `http://localhost:3000`

## Package Information

---

- **Package Name:** `libcec6`
- **Version:** 6.0.2-5
- **Description:** USB CEC Adaptor communication Library (shared library)
- **Ubuntu Version:** 22.04 (Jammy)

## Note

---

This fix ensures that future installations and updates will use the correct package name for Ubuntu 22.04 and later versions.
